DETAILED ACTION

Response to Amendment

1. Applicant's amendment filed on December 22, 2005 has been entered. Claims 1, 14, and 15 have been amended to incorporate the limitation of claim 2. Claim 2 has been cancelled. Although Applicant states in the remarks that claims 1 and 3-27 remain pending in this application, there has never existed claims 16-27. In fact, claims 1 and 3-15 remain pending in this application, and are considered below.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1, 3-5, 8, 12, 14, and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by Provost et al. (US 2004/0157036).

Provost et al. disclose a fibrous layer adjacent to a carrier sheet wherein the fibrous are needled through the carrier sheet to form loops on the other side (Abstract and Figures 2-4). With regard to the limitation that the fibrous layer has random

Application/Control Number: 10/737,235

Art Unit: 1771

orientation with respect to the X-Y plane, Applicant has defined this limitation as including carded nonwoven webs (see claim 7). Provost et al. use a carded layer of fibers (paragraph 11), so the fibrous layer meets the random orientation limitation. With regard to claim 3, Provost et al. teach a nonwoven fabric may be the carrier sheet (paragraph 29). With regard to claims 4 and 5, the carrier sheet may be an apertured film (paragraph 29 and Figures 2-4). With regard to claim 8, the regions can be uniformly distributed (see Figure 9).

4. Claims 1, 3, 6-9, 12, 14, and 15 are rejected under 35 U.S.C. 102(b) as being anticipated by Tranfield (U.S. Patent No. 3,684,284).

Tranfield discloses a fabric wherein a fibrous batt of randomly oriented thermoplastic fibers is needled through an adjacent layer of knitted cotton to form tufts on the other side of the knitted fabric (column 3, lines 22-38 and Figures 6-7). Discrete regions are formed wherein a portion of fibers are disposed substantially perpendicular to the pile surface penetrating through the layers of knitted fabric (column 3, lines 45-50).

5. Claims 1, 3, 6-10, and 12-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Sorimachi et al. (U.S. Patent No. 5,508,080).

Sorimachi et al. teach a laminated material wherein filaments of a web are penetrated through a nonwoven fabric (Abstract). The web has a random orientation in the X-Y plane because it is formed from entangled fibers (column 3, lines 54-56) and no particular orientation is described. Needling creates discrete portions of fibers extending towards the nonwoven fabric in a uniform fashion, as can be seen in the

Art Unit: 1771

Drawings. With regard to claim 6, the caliper of the web of fibers and the nonwoven fabric is different (see Figure 2). With regard to claim 7, the nonwoven fabric layer is spunbonded (column 8, lines 20-21). With regard to claim 9, various thermoplastic fibers are used (column 3, lines 54-56). With regard to claim 10, bicomponent fibers may be used (column 8, lines 14-16). With regard to claim 12, the fibers of the web may extend through the nonwoven fabric (see Figure 2). With regard to claim 13, the fibers of the web may only entangle with the nonwoven fabric and not extend through (column 4, lines 37-43 and Figure 1).

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sorimachi et al. in view of Kotek et al. (U.S. Patent No. 6,120,718).

Sorimachi et al. teach fibers may be hollow in order to provide a voluminous texture (column 8, lines 13-15), but fail to teach the fibers to be non-round. Kotek et al. disclose that higher void volume may be achieved with hollow fibers that are lobal (column 1, lines 32-45). It would have been obvious to a person having ordinary skill in the art at the time of the invention to use non-round fibers in Sorimachi et al. in order to increase bulk, as taught to be known by Kotek et al.

Art Unit: 1771

Double Patenting

Page 5

8. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

9. Claims 1 and 3-15 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-27 of copending Application No. 10/737,306. Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims are directed to a fibrous article comprising similar longitudinal orientations of fibers in discrete areas in one layer with similar dependent claims.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

10. Claims 1 and 3-15 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1, 4, 6-12, and 14-30 of copending Application No. 10/737,307. Although the conflicting claims are not identical, they are not patentably distinct from each other because the '307 Application

Application/Control Number: 10/737,235 Page 6

Art Unit: 1771

is directed to a fibrous article with differing properties between the layers and areas of discrete tufts.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

11. Claims 1 and 3-15 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-20 of copending Application No. 10/737,430. Although the conflicting claims are not identical, they are not patentably distinct from each other because both sets of claims are directed to a fibrous article comprising similar longitudinal orientations of fibers in discrete areas in one layer with similar dependent claims.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

12. Claims 1 and 3-15 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-44 of copending Application No. 10/737,640. Although the conflicting claims are not identical, they are not patentably distinct from each other because the '640 Application also claims a fibrous web with discrete areas of fibers having linear orientation in the direction of tufts formed.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Response to Arguments

Application/Control Number: 10/737,235 Page 7

Art Unit: 1771

13. Applicant's arguments filed December 22, 2005 have been fully considered but they are not persuasive.

- 14. Applicant argues that Provost fails to disclose "wherein each said discrete region has a linear orientation defining a longitudinal axis in said X-Y plane." However, Applicant fails to assert how this claim limitation establishes any sort of structure that is distinct from the material of Provost et al. The discrete tufts of Provost et al. meet this limitation because they possess a linear orientation defining a longitudinal axis in the X-Y plane (See Figure 2C). Applicant has not made clear what sort of structure this claim limitation defines that is not present in Provost et al.
- 15. Applicant argues that Tranfield fails to disclose "wherein each said discrete region has a linear orientation defining a longitudinal axis in said X-Y plane." However, Applicant fails to assert how this claim limitation establishes any sort of structure that is distinct from the material of Tranfield. There exists a linear orientation defining a longitudinal axis in the X-Y plane in the discrete regions of the material of Tranfield. Applicant has not made clear what sort of structure this claim limitation defines that is not present in the Tranfield reference.
- 16. Applicant argues that Sorimachi fails to disclose "wherein each said discrete region has a linear orientation defining a longitudinal axis in said X-Y plane." However, Applicant fails to assert how this claim limitation establishes any sort of structure that is distinct from the material of Sorimachi. There exists a linear orientation defining a longitudinal axis in the X-Y plane in the discrete regions of the material of Sorimachi.

Art Unit: 1771

Applicant has not made clear what sort of structure this claim limitation defines that is not present in the Sorimachi reference.

17. Applicant argues that Kotek et al. fails to remedy the shortcomings of Sorimachi. However, the Examiner does not believe Sorimachi to be deficient with respect to the claim 1 limitations.

Conclusion

18. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jeremy R. Pierce whose telephone number is (571) 272-1479. The examiner can normally be reached on normal business hours, but works flextime hours.

Application/Control Number: 10/737,235 Page 9

Art Unit: 1771

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Terrel Morris can be reached on (571) 272-1478. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
